

February 21st 2023

//* Further to correspondence with the Food and Drug Administration [FDA, USA], please note the existence of factual inaccuracies on the Government of Canada [Health Canada] website.

For example, mention is made of "HIV-1" and "HIV-2" as apparently specific / separate viral entities, which brings forth a "reasonable" association to the virus known as "Human Immunodeficiency Virus".

<https://www.canada.ca/en/health-canada/services/publications/drugs-health-products/drug-medical-device-highlights-2020/approved-2020-medical-devices.html#in-vitro>

This is but one example.

Given that evidence-based medicine is considered a priority with regards to policy development, research and innovation [biotechnology / biopharmaceuticals / medical devices], and public education, I am respectfully requesting substantiation of the subject matter that makes reference to "HIV-1" and "HIV-2".

I await your response.

Sincerely,

*/
